NOTE: This is a 'working draft' sequence. It currently consists of 144 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

**NOTE: This record contains 198 individual sequencing reads that have not been assembled into contrips. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced.

**Hollowever, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will

** be preserved.

The present sequence is the L-homoserine resistance gene, rhtB, from Escharichia coil. This sequence may be used to impart L-homoserine resistance on E. coil bacteria, which would be useful for producing a high yield of L-homoserine. L-homoserine resistance means that the bacteria will be able to grow on a minimal medium containing L-homoserine at a concentration at which the corresponding wild-type strain would not grow. Since the transformed bacteria can grow on the minimal medium, it can synthesise L-homoserine, which accumulates. The accumulated amino present invention may also be used to synthesise L-threonine, L-valine and L-leucine at increased levels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain recaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders polypeptide and polymucleotide sequences have applications in

                                                                                                                                                                                                                                                                                   셤
                                                        ð
                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to isolated polymuclectide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PGK) primers, oligomers, and for chomosome and gene mapping, and in recombinant production of (II). The polymuclectides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal cutivity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful for treating disorders of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymuclectide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and amino acid sequences. Assetig7-AAS94564 represent novel human diagnostic coding sequences. Assetig7-AAS94564 represent novel human diagnostic coding sequences. Assetig7-AAS94564 represent novel human diagnostic coding sequences. Assetig7 from MIPO at the sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from MIPO at the sequences.

                                                                                                                                                                                                                                                                                                                                                                  1605
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1545
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAH84373 to AAH84499 represent Escherichia coli growth and proliferation related DNA sequences (I). AAH84500 to AAH84670 encode the E. coli growth and proliferation related proteins given in AAG989078 and AAG98830 to AAG98999. (I) can be used as potential targets for the generation of new antimicrobial agents, and for identification of compounds which interact with the gene products of (I). In addition the expression of (I) and the generate reagents and soreen small molecule libraries or other candidate compound libraries for compounds that can be further developed to yield novel antimicrobial compounds. In addition, nucleic acid probes complementary to (I) that are specific for particular species of microorganisms can be used to identify particular microorganism species in clinical specimens, therefore, providing a rapid and dependable method

by which to identify the causative agents of a bacterial infection. Also, antibodies generated against proteins translated from MRNA transcribed from proliferation-required sequences can also be used to screen for specific microorganisms that produce such proteins in a species-specific anner. AAH84371 and AAH84670 represent sequencing primers used in the isolation of E. coli growth and proliferation related sequence, which are used in an example from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    180

the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid, (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable (6) inhibiting cellular proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway required for proliferation or the activity of a gene in an operon required for cellular proliferation of the proliferation, or that inhibits cellular proliferation (6) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation required for cellular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a pathway in which a proliferation-required gene or its gene product lies overaxpressed or underexpressed; (10) profiling a compound, sactivity; (11) a culture comprising strains in which the gene product is overaxpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the confidential persent or soreening for homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. preumoniae or P. aeruginosa. The present sequence is one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in cell company of the printed specification, but was obtained in cellular days.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ô
                                                                                                         New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      261
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            321
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120

Claim 14; SEQ ID NO 23973; 1766pp; English

The invention relates to an isolated mucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the mucleic acid inhibites proliferation of the mucleic acid inhibites proliferation of included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense conclider acid; (2) an bost cell containing the vector; (3) an isolated continued to polypeptide; (5) producing the polypeptide; (6) inhibiting calcular proliferation or the activity of a gene in an operon required for the proliferation or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (7) identifying a compound that influences the activity of required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies cor a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underspressed; (12) determining the extent of compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underspressed; (12) determining the extent of conficeration of an organism. The antisense mucleic acids required for proliferation to isolate candidate molecules for rational drug discovery programs, or for screening for homologous nucleic acids required for proliferation to isolate candidate molecules for rational drug discovery programs. Or for screening for homologous nucleic acids required for proliferation in calls other than S. aureus, S. typhimucle for required for proliferation in calls other than S. aureus, S. typhimucle for not format directly from WIPO at the sequence data for this patent did one terminal genes. No electronic format directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the mucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid, mucleic acid, (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding antisense nucleic acid; (4) an antibody capable of specifically binding closh proplifieration or the activity of a gene in an operon required for proliferation or that has an activity against a biological pathway required for proliferation, or that that inhibits cellular proliferation; (7) identifying a compound that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological central proliferation or the think in a proliferation or the biological pathway in which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a companism acts; (9) manufacturing an antibiotic; (10) profiling a compusion or comprising frains in which the gene product is solverexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of 540 New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs. ```
strains; or (13) identifying the target of a compound that inhibits the identifying proteins or screening for homologous nucleic acids are useful for for cellular proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational fund discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  TOGCTGGCCTCTACTCAATCGCGTCGACATTTGTTCCAGCGCGCAGTTTTTGTGAATCTC 357

The invention relates to an isolated mucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the mucleic acid inhibites proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the mucleic acid condition and isolated by the mucleic acid; (2) an bost cell containing the vector; (3) an isolated condition and polypeptide or its fragment whose expression is inhibited by the antisense mucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or that has an activity against a biological pathway required for proliferation, or that that an activity against a biological pathway required for proliferation, or that tinhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits specification of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the test compound that inhibits proliferation of computed is overexpressed or underexpressed; (12) determining the extent to twhich each of the strains is present in a culture or collection of strains, or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids required for is convery programs or for screening for homologous nucleic acids required for the programs or for screening and an organism. Or for screening and an organism or for screening and an organism or the sail and an organism. The section of an organism or for screening for homologous nucleic acids required for the procession of an organism. Or for screening candidate model and organism or for screening candidate model and organism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1 ATGACCTTAGAATGGTGGTTTGCCTACCTGCTGACATCGATCATTTTAACGCTGTCGCCA

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the mucleic acid inhibits proliferation of a cell. Also included are: of the nucleic acid inhibits proliferation of a cell. Also included are: concoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated collypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or that has an activity against a bological pathway the gene product or that has an activity against a bological pathway to require for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation of an organism acts; (9) manufacturing an antibiocit; (10) profiting a compound; as activity; (11) a culture comprising strains in which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiocit; (10) profiting a compound; as extivity; (11) a culture comprising strains in which ach of the strains is present in a culture or collection of product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a compound that inhibits the strains; or (13) identifying the target of a compound that inhibits for cellular proliferation to isolate of compound that inhibits of collection of an organism. The antisense nucleic acids are useful for cellular proliferation in cells other than 8; aureus, 8; typhimurium, ceptured for proliferation in cells other than 8; aureus, 8; typhimurium, ceptured for proliferation in cells other than 8; aureus, 8; typhimurium pattent did not forme patter of the printed specification, but was obtained the pattent did not formed directly from MIPO at geq
                                                   New antisense nucleic acids, useful for identifying proteins or s
for homologous nucleic acids required for cellular proliferation
isolate candidate molecules for rational drug discovery programs.

ΥŢ,

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, ollogomers, and for chomosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal cartivity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a useful for generating antibodies against it, detecting or quantitating a useful for generating antibodies against it, detecting or quantitating of supplement. (II) and its binding pattners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations are also propertied. ö 1160 Gredeacrargrararregeseagririrgreaarcreaecaareecaaaagrarrerer 1219 1220 TTCTGGCGGCGCTATTTCCGCAATTCATCATGCCGCAACAGCCGCAACTGATGCAGATA 1279 379 439 440 TCGTGCTCGCCGTCACCACTATTGTGGTCGATATTATTGTGATGATCGGTTACGCCACCC 499 and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at TTCTGGCGGCGCTATTTCCGCAATTCATGCCGCAACAGCCGCAACTGATGCAGTATA GTCGACATTTGTTCCAGCGCGCAGTTTTTGTGAATCTCACCAATCCCAAAAGTATTGTGT New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess . 0 DB 5; Length 1884; Sequence 1884 BP; 495 A; 464 C; 479 G; 446 T; 0 U; 0 Other; 40.4%; Score 248.6; DB 5; Length 96.6%; Pred. AAH84373 to AAH84499 represent Escherichia coli growth and proliferation related DNA sequences (I). AAH84500 to AAH84670 encode the E coli growth and proliferation related proteins given in AAG99079 and AAG98830 to AAG98830 to and proliferation related proteins given in AAG99079 and AAG98830 to compare the proliferation of compounds which interact with the gene products of (I). In addition the expression of (I) and the proteins, the purified proteins can be used to compound libraries for compounds that can be used to generate reagents and screen small molecule libraries or other candidate compound libraries for compounds. In addition, nucleic acid probes compounding compounds. In addition, nucleic acid probes complementary to (I) that are specific for particular species of microorganisms can be used to identify particular microorganism species in clinical specimens, therefore, providing a rapid and dependable method by which to identify the causative agents of a bacterial infection. Also, by which to identify the causative agents of a bacterial infection. Also, specific microorganisms that produce such proteins in a species specific manner. AAH844311 and AAH84670 represent sequencing primers used in the isolation of E. coli growth and proliferation related sequence, which are isolation of E. coli growth and proliferation related sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel nucleic acids that inhibit Escherichia coli proliferation, useful for screening for homologous genes and for designing expression vectors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               305 CCTCTACTCAATCGCGTCGACATTTGTTCCAGCGCGCAGTTTTTGTGAATCTCACCAATC

New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity.

Claim 1; SEQ ID NO 25214; 103pp; English.

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain sequences. (I) is useful as hybridisation probes, polymerase chain in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed can be suppressed sequence tags for identifying expressed can be suppressed to the control of (II) or to treat disease states involving (II). (II) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of states expressabing (II). (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in dispostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and

Sequence 107, Application US/09711164
Patent No. 6589738
GENERAL INFORMATION:
APPLICANT: Forsyth, R. Allyn
APPLICANT: Forsyth, R. Allyn
APPLICANT: Cyskind, Uddith
TITLE OF INVENTION: EXERES ESSENTIAL FOR MICROBIAL PROLIFERATION AND ANTISENSE THERET
FILLE OF INVENTION: 2000-11-09
FILLE REPERENCE: ELITRA.008A
CURRENT APPLICATION NUMBER: US 60/164415
PRIOR FILLING DATE: 1999-11-9
PRIOR FILLING DATE: 1999-11-9
NUMBER OF SEQ ID NOS: 469
SOUTWARE: FESTSEQ for Windows Version 4.0

Sequence 6551795

GENERAL INFORMATION:

APPLICANT: Marc J. Rubenfield et al.

APPLICANT: Marc J. Rubenfield et al.

TITLE OF INVENTION: NUCLEIC AID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 107196.118

FULLE APPLICATION NUMBER: US 60/074,788

PRIOR PILING DATE: 1998-02-18

PRIOR PLILIGATION NUMBER: US 60/094,190

PRIOR APPLICATION NUMBER: US 60/094,190

PRIOR APPLICATION NUMBER: 1998-07-27

NUMBER OF SEC ID NOS: 33142
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ATC-GGTTACGCCACCCTTGCTCAACGGATTG--CTCTATGGATTAAAGGACCAAAGCAG 540

Patent No. US20020102670A1

GENERAL INPORMATION:

APPLICANT: LIVSHITS, VIPALY ARKADIEVICH

APPLICANT: LIVSHITS, VIPALY APVIOVNA

APPLICANT: ALCOSHIN, VIALDIMIR VENYAMIOVICH

APPLICANT: ALCOSHIN, VIALDIMIR VENYAMIOVICH

APPLICANT: TOKHMAKOVA, IRINA LVOVNA

TITLE OF INVENTION: DAS CODING FOR PROTEIN WHICH CONFERS ON BACTERIUM

TITLE OF INVENTION: ESCHERICHIA COLI RESISTANCE TO LO-HOMOSERINE AND METHOD

TITLE OF INVENTION: FOR PRODUCING L-AMINO ACIDS

TITLE OF INVENTION: ESCHERICHIA COLI RESISTANCE

TITLE OF INVENTION: ESCHERICHIA COLI RESISTANCE

CURRENT APPLICATION NUMBER: US/09/447,392

CURRENT FILING DATE: 1999-09-15

PRIOR APPLICATION NUMBER: RU99118425

PRIOR APPLICATION NUMBER: RU99118425

PRIOR APPLICATION NUMBER: RU99118425

PRIOR SEQ ID NOS: 2

SOFTWARE: Patentin Ver. 2.1
